

London Transport Museum

Summary	Structure Cabling & AV Cabling
Location	Covent Garden
Contract	£100K
Systems	Excel Cat 5e UTP
Start & Finish	February 07 - November 07
Contractor	Imtech Meica
Project Description	<p>The new museum in Covent Garden opened in November 2007 after a two year £22M redesign project. The Museum tells the story of the development of London, its transport system and the people who travelled and worked on them over the last 200 years.</p> <p>Able Data installed a structured flood wired system throughout the Museum and Gift shop. This involved installing cables at large heights in order to reach all parts of the museum. Different sections were also interconnected with a fibre backbone.</p> <p>Able Data also installed a network of specials AV links to support the equipment to enable visitors to enjoy a full vision and Audio commentary as they walk around the museum.</p>
