

TV & Satellite Systems

Able Data designs and installs high quality TV & Satellite distribution systems. These systems are required in any building where multiple TV's are fed from centralised aerials and satellite dishes. Typical applications include apartment blocks, offices, schools & colleges, hotels, sports centres, retirement homes and even whole villages.

Using the latest technology and employing the same high methods of quality gained through being a leading cabling infrastructure provider, Able Data has built a reputation with its customers for building highly effective and reliable solutions.

In combination with its data/voice cabling and network services, Able Data offer a one-stop integrated solution for infrastructure services.

Technology

Able Data focuses on designing and building scalable and flexible systems which can be extended to meet the fast changing demands of modern technology. The latest innovations are employed, such as using fibre for TV & Satellite signal distribution, to ensure maximum future proofing.

- ✦ SMATV, IRS and FIRS
- ✦ Multiple Satellites
- ✦ Analogue & Digital TV head ends
- ✦ IPTV

Applications

Able Data builds systems for any building or organisation that requires multiple TV/Satellite outlets. System sizes can vary from a few TV outlets to supplying TV & Satellite services to an entire campus or area. Typical applications include:

- ✦ Apartment Blocks & Housing
- ✦ Offices
- ✦ Schools & Colleges
- ✦ Hotels

Building IPTV

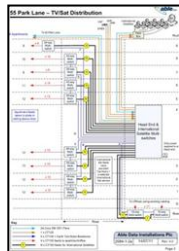

Building IPTV involves the distribution of TV over a data cabling network. Ideal for organisations such as offices and hotels, where a network infrastructure already exists, IPTV allows TV distribution without requiring a separate satellite/signal distribution system. IPTV's scalability and ease of management promotes the rapid rollout of new TV, video and broadband services across the whole organisation in response to opportunities.

As a leading data and network specialist, Able Data is ideally suited to acting as a one company solution for IPTV.

Consultancy Services

Able Data provides stand-alone consultancy services for designing TV systems. With almost ten years in the industry and the experience of designing a broad range of TV system for domestic and commercial clients, Able Data is ideally positioned to apply this expertise to help architects and system designers to specify suitable systems using the latest techniques and technology. All designs are produced to high standards using detailed schematics and comprehensive explanations.

Exceptional Quality of Work

Able Data has consistently demonstrated the ability to deliver high quality installations into very fast track and demanding environments. More than 70% of Able Data's business comes from existing clients, showing Able's ability and focus on customer satisfaction.

- ✦ Use of only the highest quality equipment
- ✦ Adhere to all industry design standards
- ✦ All cables professionally dressed
- ✦ High standards of documentation

Maintenance

Able Data provide a comprehensive maintenance service for TV/Satellite reception systems. Whether affecting an entire site/building or just one user, Able Data will repair it.

- ✦ Support of the entire TV distribution system from the aerials & dishes on the roof through to the tenant/user outlets
- ✦ Next working day call out (other services are available)
- ✦ Faulty equipment will be repaired or replaced as required
- ✦ Regular scheduled visits to check and tune system levels
- ✦ General advise for system usage and add-ons
